Passionate About Building Scalable AI-Driven Solutions That Solve Real-World Problems

## PROFESSIONAL SUMMURY

**I am a Diploma student specializing in Artificial Intelligence and Machine Learning (AIML) with hands-on experience in Python programming, IoT application development, and automation solutions. My focus is not just on learning algorithms, but on applying them to real-world challenges. I enjoy creating innovations that balance intelligence with sustainability.**

## TECHNICAL SKILL

- **Programming Languages & Technologies**: Python, Dart, Fast API Arduino, ESP32, STM32, Raspberry Pi, Sensor integration (temperature, humidity, motion, light, gas), Embedded C/C++ for microcontroller programming
- **Tools & Concepts: Arduino IDE** – programming and debugging microcontrollers,

## EDUCATION

**Govt. Tool Room and Training Centre (STU-36), Magadi** **2023-Present**

*Diploma of Artificial Intelligence and Machine Learning*

**Mahatma Gandhi High School, Kunigal** **2021-2023**

*SSLC (Secondary School Leaving Certificate)*

## PROJECTS

- **IOT Monitoring App (Eye On):**
  Developed a full-scale IoT Monitoring & Automation mobile application using Flutter that integrates real-time APIs to monitor environmental, weather, feedback analytics, and smart device control systems. Implemented GET and POST API communication for live data visualization and device actuation with auto-refresh and optimistic UI updates.
  ***Technologies Used:*** Flutter (Dart), REST APIs, HTTP Package, Theme Management, Glass morphism Design, IoT Cloud API Integration.

- **Mini Chatbot (Zila)**: A mini chatbot designed to interact with users through natural language, providing quick responses and guidance, and simulate human-like interaction. Built as a compact project showcasing the fundamentals of intelligent communication.

  ***Technologies Used***: Python – for scripting and logic implementation, Natural Language Processing (NLP) concepts – to understand and process user queries, AIML (Artificial Intelligence Markup Language) – for conversational flow and response generation, Git/GitHub – for version control and project management.

**NRLM Government Web**: Developed a responsive bilingual (English/Kannada) government web portal for NRLM-KSRLPS Kunigal Taluk with SHG directories, scheme browser, photo gallery, and savings calculator using HTML, CSS, and vanilla JavaScript.
***Technologies Used:*** HTML5 · CSS3 · Vanilla JavaScript · Google Fonts · PWA (Service Worker) · local Storage API · CSS Grid · Flexbox

## ADDITIONAL INFORMATION

- **Languages:** English (Professional), Kannada (Native), Hindi (Limited)
- **Interests:** Building real-world automation using IoT&MC, Innovative project presentation, Video Editing.
